Ms. Bernadette Horvath was examined today at our clinic using the Cerebellum Multichan. Comp. system.

Based on the signs of intensity acquired using the principle of bio-resonance the following are presumed:

- signs of loaded, weakened immune-system and hyperactivity
- increased signs of intensity in the sinuses, around the pharyngeal tonsils and on the colon mucosa
- increased activity in the area of the lungs and the thymus
- chronic rhinopneumonitis
- fungal load (candida, epidermyphyton, mon.albicans)
- loaded lung-colon energy-circle
- alimentary and inhalation sensitivity (milk, dairy products, eggs, meats, wheat, rye, soy, sugar, goose feather, cat fur, grass and tree pollens)

Therapeutic suggestions:

- harmonization of the body's energetic system
- unloading and strengthening of the immune-system
- strengthening of the deferent organs (kidney, liver, lymphatic system)
- targeted organ therapy:
sinuses, colon, lymphatic system, lung, thymus
- extinction of the sensitivities
- abolition of fungal load

Budapest, 30/04/1997

Dr. Eva Kovács
